Course Description: The course examines important issues in international corporate finance using a mixture of classes involving lecture/discussion and the analysis of cases. After a review of international finance fundamentals, we will examine international capital budgeting decisions, which require an understanding of exchange rates and the determination of an appropriate cost of capital. We will use both discounted cash flow analysis, adjusted net present value analysis, and various multiples in our valuations. These issues are examined as they arise in the valuation of direct foreign investments, leveraged buyouts, initial public offerings, and international mergers and acquisitions. Several of the cases involve corporations in emerging markets where issues of political risk arise. The course also analyzes the determination and management of foreign exchange risks of various types. The cases include discussions of the use of foreign currency forwards, options, and swaps and their appropriate use in risk management to enhance the value of a firm.

Prerequisites: This is a quantitative finance course. Students should have taken Capital Markets and Investments or its equivalent prior to enrolling in the course.

Connection with the Core: The class will utilize, build on, and extend concepts covered in the following core courses:

Corporate Finance:
- Present Value
- The Capital Asset Pricing Model
- Systematic vs. Idiosyncratic Risk
- Valuing a company with discounted cash flow analysis

Managerial Finance:
- Statistical concepts such as means, variances, and covariances
- Normal distributions
- Linear regression

Global Economic Environment:
- Interest Rates and Inflation
- The Determination of Exchange Rates

Cases: Cases are available as PDFs on Canvas. Questions for the cases are also on Canvas.
Course Requirements:

Your grade will be based primarily on class participation, which will assess both the quantity but more importantly the quality of what you contribute to class discussions.

Class Participation: 75%; Take-Home Final: 25%

When cases are discussed, we will break out into groups to first read and then discuss the cases. You are expected to participate as an equal partner in your group, which can have as few as three and as many as five members. I will cold call both groups and individuals for answers.

Honor Code:

The Take-Home Final Exam is to be done individually and is open-book and open-note. Do not share your analysis of the questions with other classmates.

Schedule

All readings are required and should be done prior to the class, if possible. I realize that this block-week class is a very compact schedule, so time for case preparation will be allowed in class as well as breakout time for case discussion in groups.

Day 1:

Introduction to Foreign Exchange Markets and Transaction Exchange Risk

Spot and Forward Foreign Exchange Markets, Transaction Exchange Risks, and Interest Rate Parity

Bekaert and Hodrick, Chapter 2, The Foreign Exchange Market
Bekaert and Hodrick, Chapter 3, Forward Markets and Transaction Exchange Risk
