</table>

Students will be expected to have mastered these concepts and be able to apply them in the course.
COURSE DESCRIPTION

This is a finance course, designed around a combination of cases and financial tools to reach our course objectives. The course is composed of two modules:

I. Financing Environmental Solutions
   a. Financing land conservation – capital markets and investment management
   b. Carbon markets and climate change – capital markets and project finance
   c. Financing renewable energy – project finance
   d. Catch shares and sustainable fisheries – capital markets
   e. Financial innovation for the environment – various financial tools

II. Financing Sustainable Economic Development
   a. Socially responsible investing – investment management
   b. Microfinance in developing countries – commercial banking
   c. Financing SMEs in developing countries – commercial banking and investment management
   d. Project finance in developing countries – project finance
   e. Community development finance in the US – investment management
   f. Financial innovation for poverty reduction – various financial tools

In the final class, students will make group presentations of a case that covers many of the financial tools and sustainability issues discussed throughout the course.

COURSE OBJECTIVES

This course is designed for both MBA students planning a career in financial services who want to understand the potential impact of their work on issues of sustainability, and for students planning a career in social enterprise who want to understand the application of financial tools. Specifically, the course objectives are to:

1. Understand the relationship between finance and sustainability.
2. Analyze which financial tools are effective (as measured by both sustainable impact and the ability to earn a financial return), and which are not.
3. Construct models of finance and sustainability that can be practically applied in a variety of contexts.

This course provides a high level introduction to the financial tools that can be used to address sustainability across a broad range of issues. By design, this course does not provide a deep dive on any specific issue. Students interested in a deeper exploration of climate change are recommended to take Carbon Finance (B8363), and students with a strong interest in impact investing are recommended to take the Impact Investing Seminar (B8355). Note that there is some overlap between the Finance & Sustainability course, which provides an introduction to these topic areas, and the Carbon Finance and Impact Investing courses, which include more in-depth analysis.
ASSIGNMENTS

Students are required to individually prepare 3 case write-ups during the course, each of which is a maximum of one page. There is no final exam; instead you are required to complete a group project and presentation in the last class.

METHOD OF EVALUATION

This course relies predominately on the case method. Although this is a finance course, there is relatively little modeling required, as the focus of most of the classes is on understanding concepts, and the challenges and opportunities of applying those concepts in real-world settings. The chosen cases analyze companies that use financial tools to create sustainable social and/or environmental value, in order to understand why certain business decisions and models have succeeded while others have failed. This course requires active class participation, and students’ grades will be heavily dependent on the quality of class discussion. Guest speakers will be invited to some classes and will provide an opportunity for students to meet industry specialists. Students are expected to challenge each other and to challenge the professor and our guests.

<tr>
<td>Case write-ups (Type C - individual)</td>
<td>30%</td>
</tr>
<tr>
<td>Final group presentation (Type A - group)</td>
<td>30%</td>
</tr>
</tbody>
</table>

CLASSROOM NORMS AND EXPECTATIONS

Students are required to prepare for each class by reading and analyzing the assigned cases, utilizing the study guidance questions which are provided in the Canvas system. Students are expected to add thoughtful analysis to each class discussion.
